Notes:
Compatibility tests are conducted by Soraa (unless stated otherwise) under bench conditions as guidance for the user; results at the application site may differ due to variability in usage conditions or in dimmer or transformer components/manufacturing.
Regards compatibility tests conducted by dimmer manufacturer, please contact the manufacturer for more details and/or reports.
If the transformer's minimum wattage is not met, the lamp may only operate under nominal conditions (nominal line voltage and thermal conditions where the lamp is at full power).
The lamp load (or number of lamps) should meet minimum load requirement of respective dimmer.
If the dimmer and transformer is not listed, please consult with Soraa before making recommendations to the end customer.
Transformer/dimmer maximum load should not be exceeded. Please follow transformer/dimmer manufacturer's guidelines regarding maximum load with LED lamps. To calculate the estimated maximum number of lamps, please download our calculator from the following link https://res.cloudinary.com/soraa//raw/upload/v1452276139/content/max-lamp-load-calculator.xlsx
